

Table of Contents

Invited Lectures

Long time tails in N -body Hamiltonian systems	
Yoji Aizawa	1
Relaxation of one-dimensional self-gravitating many-body systems	
Toshio Tsuchiya	2

Many-Body Chaos in Physics

Lyapunov spectra and structure of phase space	
Yamaguchi Y. Yoshiyuki	15
Arnold web in a vibrationally highly excited molecule	
Mikito Toda	24
Statistical behavior in one-dimensional many-body system	
Mitsusada M. Sano	26
An example of nonlinear phenomena in high energy accelerators	
Kohji Hirata	36
Effects of interaction between heat reservoir and cluster on spontaneous alloying phenomenon	
Taizo R. Kobayashi, K. S. Ikeda, S. Sawada, and Y. Shimizu	42

Chaotic Dynamical Systems

The intersection angles between N -dimensional stable and unstable manifolds in $2N$ -dimensional symplectic mappings	
Yoshihiro Hirata, Kazuhiro Nozaki, and Tetsuro Konishi	53
The distribution of periodic point in nearly integrable maps with dual symmetries	
Tsuyoshi Maruo	58
Breakup of KAM curves in twist mappings	
Yoshihiro Yamaguchi and Kiyotaka Tanikawa	73
Effects of chaos and noise in the reproduction of dynamical systems	
Manabu Yuasa and Shigeko Magono	80
Method of constructing multi-dimensional exactly solvable chaos	
Ken Umeno	88

Friction by Many Bodies

A study of the friction like phenomena by N body molecular dynamics method	
Kazuo Haraoka, K. Tsutsui, K. Hayashi, K. Shida, and T. Kawai	93
Law of wearless friction in sub-micrometer size actuators revealed by molecular dynamics simulation	
Keiji Hayashi, Akifumi Maeda, Satoru Abe, Noriyuki Sakudo, Kazuo Haraoka, Kiyoshi Tsutsui, and Toshio Kawai	99
Multiroll structure induced by Maxwell's thermal creep	
Koichiro Shida, Wm. G. Hoover, and Shin'ichi Yamada	104
Stability of the replica symmetry of random walks in 2-D random environments	
Kiyoshi Tsutsui	109

Three-Body Problems

Improvement of the triple-encounter criterion	
Hiroaki Umehara and Kiyotaka Tanikawa	115
Escape regions near an equilateral triangular equilibrium point in the free-fall three-body problem	
Takeshi Nakamura	123
New variables for the free-fall three-body problem	
Masayoshi Sekiguchi and Kiyotaka Tanikawa	132
Symbolic dynamics in one-dimensional three-body problem	
Kiyotaka Tanikawa and Seppo Mikkola	141

Planetary Formation and Resonances

Synchronization of orbital elements and stability of protoplanet systems	
Takashi Ito and Kiyotaka Tanikawa	151
Formation of protoplanets in the region of terrestrial planets	
Kouji Shiidsuka	181
Angular momentum transports in dense, self-gravitating particle systems	
Hiroshi Daisaka	189
Accretional process of the moon from the protolunar disk	
Takaaki Takeda	197
Titius-Bode's law in a simulated planetary system of two-dimension	
Toshio Kawai and Yukio Yamamoto	203

Resonances in the Outer Solar System

Structure of mean motion resonances in outer solar system	
Tetsuharu Fuse, Hiroshi Kinoshita, and Hiroshi Nakai	219
The relation between Neptune resonance and stability of the orbit in the Kuiper belt	
Hiroshi Nakai and Hiroshi Kinoshita	225
Analytical solution of the Kozai resonance and its application	
Hiroshi Kinoshita and Hiroshi Nakai	233
An analytical theory on a satellite motion with highly eccentric orbit	
Abdel-Naby S. Saad and Hiroshi Kinoshita	249

Distributions around the Solar System

Intrinsic vertical distribution of Kuiper-belt objects	
Tsuko Nakamura	269
Sub-km belt asteroid survey observations with SUBARU telescope	
— estimation of the intrinsic distribution —	
Fumi Yoshida and Tsuko Nakamura	278
Orbit integration of small celestial bodies in the interstellar space around the solar system	
Taihei Mitsubori and Haruichi Washimi	286

Many Bodies in the Universe

Statistical mechanics of self-gravitating system: cluster expansion method Osamu Iguchi, Tomomi Kurokawa, Masahiro Morikawa, Akira Nakamichi, Yasuhide Sota, Takayuki Tatekawa, and Kei-ichi Maeda	294
Primordial fractal density perturbation and structure formation of the Universe Takayuki Tatekawa and Kei-ichi Maeda	300
Reformulation of scattering problem in an expanding universe Eliani Ardi, Toshio Tsuchiya, and Shogo Inagaki	310

Numerical Techniques

The pseudoparticle multipole method Junichiro Makino	320
Symplectic integrators for nonlinear Schrödinger equation Haruo Yoshida and Narimasa Sasa	330
A method for symplectic integration of satellite orbits Seppo Mikkola	337
Super implicit multistep methods Toshio Fukushima	343
High accuracy method for solving N -body problems Nobuo Ishibashi	367

Astrodynamics of N spacecrafts

Relative orbit estimations for close geosynchronous satellites Seiichirou Kawase and Fumitake Sawada	382
Optical survey in a neighborhood of the geostationary orbit Tomoyuki Washio, H. Umehara, K. Kimura, and S. Kawase	387
Clustering control of geostationary satellites using artificial interactions Hiroaki Umehara	392
A study on the orbital analysis of geosynchronous satellites - V. — the relation between post-fit range residuals and meteorological elements — Masashi Kawai	395
Estimation of a flying object trajectory and its major specifications Arata Sengoku	405
Visualization of satellite orbital motions by virtual reality Kazuhiro Kimura	413
Author Index and Participants List	420
